

## SpandiHumus and sand with a helicoidal roller

Tecnomeccanica would like to present the latest additions to the GREEN LINE: the HumusSpreader with helicoidal roller and the sand spreader, both produced exclusively by Tecnomeccanica.

The HumusSpreader is a newly-conceived machine designed for gardening and the agricultural sector for those who need to distribute compost or soil uniformly.

These machines are particularly suitable for those managing fruit orchards or citrus and olive groves, although they can also be used for the distribution of sand, thereby making it the perfect tool for maintaining sports pitches, horseback riding rinks, and gardens.

### TECHNICAL DATA

MODEL	MAX SIZE mm	WEIGHT kg	CAPABILITY lt
SPC 160 B	1.66 mm	390 kg	950 lt
SPC 200 B	2.060 mm	430 kg	1.300 lt
SPC 250 B	2.555 mm	650 kg	1.850 lt

### ACCESSORIES

- Footprint bar and lights

MW - Mondo macchina (newspaper article)

This totally new concept machine was designed for gardening and farming operations, especially for managing fruit and citrus crops and olive plantation requiring the uniform distribution of compost or humus. The machine also performs well for the spreading of sand to make it suitable for operations on sports grounds, riding schools and gardens.
